Projects

Huysuz Android App (Graduation Project)

In this project, a voice sports assistant application is designed which moves according to the voice instructions given by the person while doing sports. The application is designed to be used on Android mobile phones. Depending on the voice commands given by the user, the application will be able to do research on a subject that the user wants, find and play the songs he wants, pass news summaries, motivate the user depending on the sport data of the user at the moment.

GTU E-Ticaret

We used **Java** as development language and we developed on **Android Studio**. Within the scope of the project.I improved myself on using data structures effectively and Android application development.
